

CTW Probe Version 20 8 28 1558

NEW FEATURES

- Seal drag-test and record a seal drag number
- **PVP view mode** in legend that makes PVP graphs open or save with CVP speed collapsed (only PVP composite trace displayed)
- Add on data card that adds 8 extra channels and collects through a USB port
- New Average force vs velocity graph, averages the CO and CC forces.
- Trace line thickness now user definable.
- Slope tool
- Area tool
- Average tool
- Pan tool

BUG Fixes

- Fix issues with auto zoom
- Fix issues on very slow PVP speeds that clipped incorrectly
- Fix various report bugs

ENHANCEMENTS

- New compressed data files up to 70% smaller.
- Changes to decreased program load time by up to 18%
- User can define rod diameter during the test.
